Essential summary

Global state: Requires monitoring

What is improving

- NutVita nutrition score
- Physical activity
- Lifestyle

Attention points

- BMI

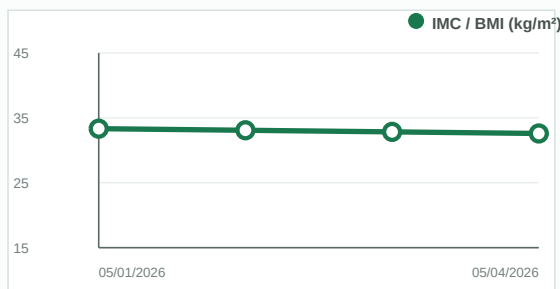

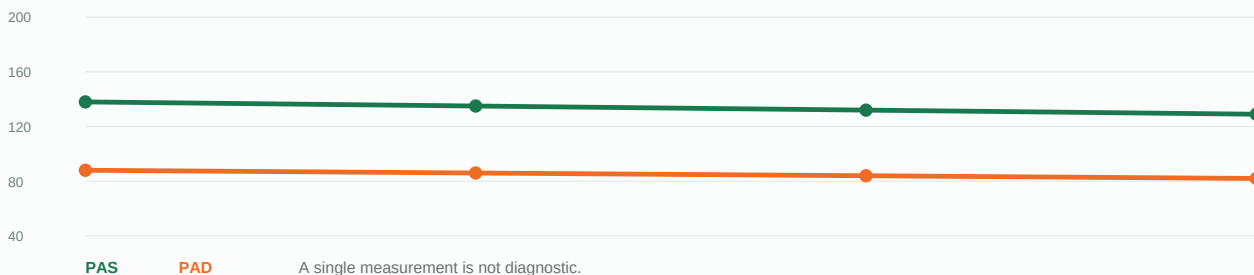

Analysis by indicator

For each indicator: recent trend, comparison to the reference, to the last measurement and since monitoring began.

Blood pressure

129/82 mmHg

IMC / BMI

Current value : 32.6 kg/m²

Reference : Adult screening categories; contextual interpretation required.

Vs last measurement : -0.25 kg/m²

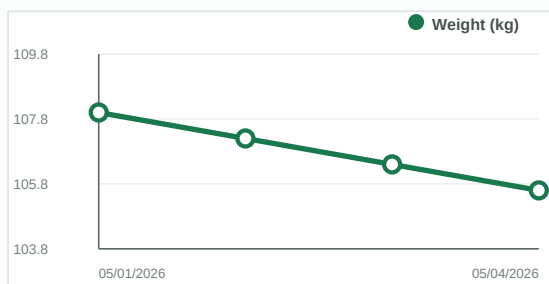

Since monitoring began : -0.74 kg/m²

Clinical observation

Current BMI is 32.6 kg/m² (-0.7 kg/m² since baseline). This screening indicator should be interpreted with waist circumference, body composition and clinical context.

Recommendation

Complete interpretation with relevant contextual measurements.

Weight

Current value : 105.6 kg

Vs last measurement : -0.80 kg

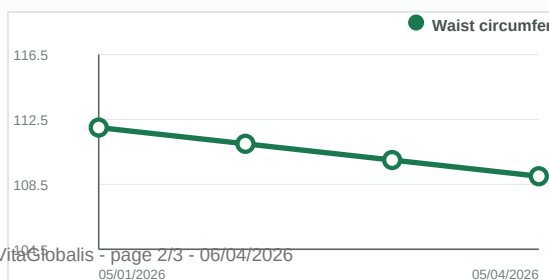

Since monitoring began : -2.40 kg

Clinical observation

Weight is trending downward: -2.4 kg since baseline and -0.8 kg since the previous measurement. Interpretation depends on the agreed weight goal.

Recommendation

Continue measurements under comparable conditions according to the agreed goal.

Waist circumference

Current value : 109 cm

Vs last measurement : -1 cm

Since monitoring began : -3 cm

Clinical observation

Current value: 109 cm; -1 cm since the previous measurement and -3 cm since baseline.

Recommendation

Continue comparable, contextualized measurements.

Nutrition, activity and lifestyle

NutVita nutrition score — 3.0/4

Good (3.0/4). NutVita nutrition score based on the overall questionnaire. Longitudinal improvement observed across 4 assessments.

Priority : Maintain progress and reassess next cycle.

Physical activity — 2.6/4

Good (2.6/4). Overall physical activity score. Longitudinal improvement observed across 4 assessments.

Priority : Maintain progress and reassess next cycle.

Lifestyle — 2.8/4

Good (2.8/4). Overall lifestyle score. Longitudinal improvement observed across 4 assessments.

Priority : Maintain progress and reassess next cycle.

SMART action plan

Action / objective	Deadline	Owner	Status
Improve physical activity — 3 sessions per week	2026-05-06	Patient	active

Previous cycle goals

- Journal alimentaire — partially_achieved

Data quality and limitations

Data quality : Good

- incomplete food diary

Data used: 4 anthropometric measurements, 4 biological, 0 food records, 4 lifestyle assessments.

Conclusion

The proposed priorities support continued

monitoring.
